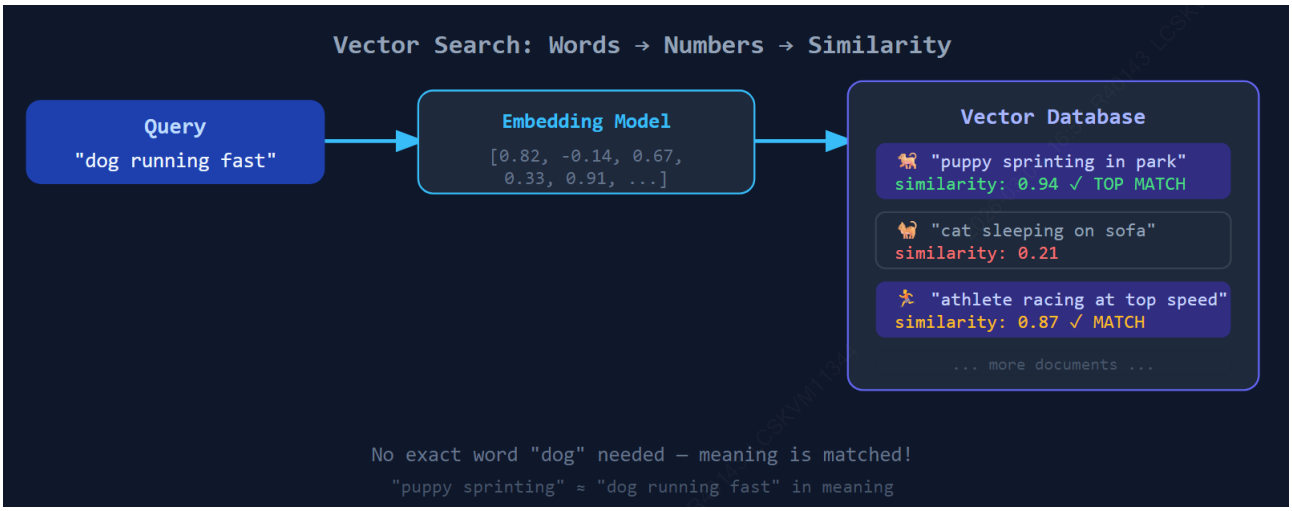
2.3 ✓ Hybrid Search Uses the Strengths of Both 6

1 1. Vector Search Recap

Vector Search *captures the mood, the vibe*

It converts text (or images, audio, etc.) into a list of numbers called a **vector** (also called an *embedding*). Similar meanings produce similar number patterns. The search engine then finds items whose number patterns are closest to your query's number pattern.

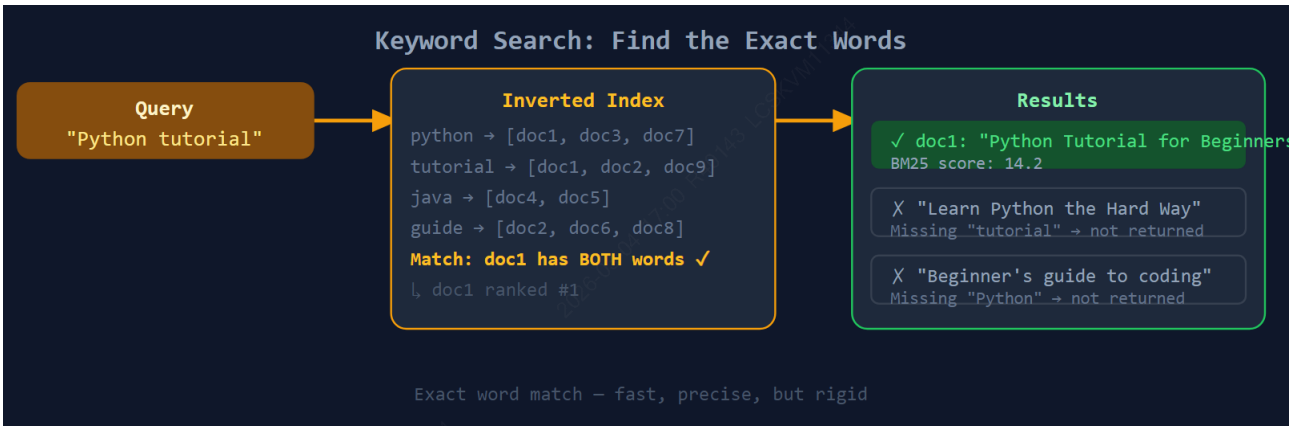


1.1 examples of Vector Search

You type...	Vector Search also finds...	Why?
`"dog running fast"`	"puppy sprinting in park"	Same *meaning*, different words
`"cheap flights"`	"affordable air travel deals"	Synonyms caught by meaning
`"heart attack symptoms"`	"signs of myocardial infarction"	Medical jargon matched to plain English
`"I'm feeling blue"`	Articles about sadness/ depression	Idiom understood semantically
`"best way to lose weight"`	"healthy tips to reduce body fat"	Intent matched, not just words

1.2 2. Keyword Search Recap

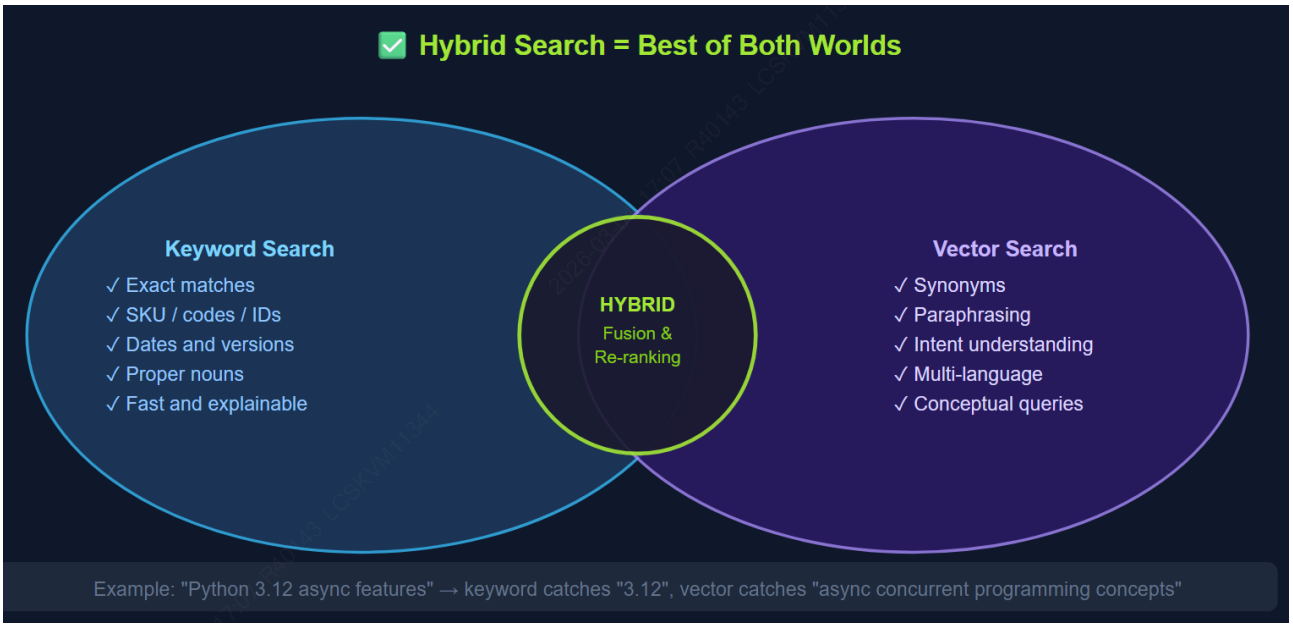
Keyword search is the *old-school librarian** approach. It looks for the *exact words* you typed — nothing more, nothing less. It's how Google worked in the early 2000s, and it still what powers many search bars today.



1.2.1 examples of Keyword Search

You type...	Keyword Search returns...	What it misses...
`"Python tutorial"`	Pages with both exact words	"Learn Python" (no "tutorial" word)
`"heart attack"`	Articles saying "heart attack"	"myocardial infarction" (same thing!)
`"cheap hotel"`	Pages with "cheap" + "hotel"	"budget accommodation"
`"fix TypeError"`	Stack Overflow with "TypeError"	Threads describing the same error differently
`"AWS error code 403"`	Pages with "403" + "AWS"	"Access Denied on S3 bucket" explanations

2 3. Hybrid Search = Vector Search + Keyword Search



2.1 😩 Keyword Search Alone Frustrates Users

Keyword search is like a **very literal-minded assistant** who only does *exactly* what you say.

2.2 Vector Search Alone Has Blind Spots

Vector search is like a **very creative assistant** who always tries to find *something similar* — even when you need *exact*.

Limitation 1 — Struggles with Specific Keywords (SKUs, Names, Codes)

```
User: "Show me product SKU-4892-B"
Vector search: Returns "similar products" in the same category
Problem: SKU-4892-B is an exact identifier — similarity is useless here!
```

Query	Vector returns (wrong!)	User actually wants
`"Error code NX-403"`	Similar error descriptions	The exact doc for NX-403

Query	Vector returns (wrong!)	User actually wants
`"Invoice #INV-2024-0019"`	Similar invoices	That specific invoice
`"CVE-2023-44487"`	Related security issues	The exact vulnerability record
`"SWIFT code CITIUS33"`	Similar bank identifiers	That exact bank

Limitation 2 — Lack of Domain & Business Knowledge

> *Vector models are trained on general internet data. They don't know your company's jargon.*

- Your company calls a feature "Turbo Mode" — the model has no idea what this means
- Your internal tool is called "Phoenix" — vector search returns mythology articles
- Medical records use abbreviations ("MI", "CABG") the general model doesn't embed well

Limitation 3 — Temporal Context (Time-Sensitive Searches)

> *"Latest", "newest", "2024" — vectors don't know when things happened.*

Query	Vector problem	Keyword helps
`"Python 3.12 release notes"`	Returns older Python docs too (semantically similar)	"3.12" exact match filters correctly
`"Q4 2024 earnings report"`	Returns all earnings reports	Exact quarter + year match
`"COVID variant XBB.1.5"`	Returns general COVID content	Exact variant name match

2.3 ✓ Hybrid Search Uses the Strengths of Both

Real-World Hybrid Search Wins:

User Query	Keyword Contribution	Vector Contribution	Combined Result
`"Python 3.12 async features"`	Pins "3.12" correctly	Finds conceptual content on async/await	Perfect targeted result
`"chest pain when climbing stairs"`	Finds "chest pain" exact articles	Understands "exercise-induced angina"	Doctor-quality results
`"cheap flights JFK to LAX"`	Pins airport codes JFK + LAX	Finds "affordable air travel" content	Correct route, right price
`"how to fix the spinning wheel on Mac"`	"Mac" exact match	Understands "spinning pinwheel = frozen app"	Right OS, right fix
